Summary

Computer Science graduate with experience in natural language processing, AI agents, and full-stack software development. Co-authored a conference paper on verifying the factual accuracy of clinical summaries and currently developing tools to evaluate AI-generated code.

Education

Vellore Institute of Technology Sep 2022 – Jul 2026
B.Tech in Computer Science and Engineering; CGPA: 9.01/10 *Vellore, India*

Experience

Junior Full Stack Developer Aug 2026 – Present
Justo Global *Chennai, India*

- Develop the frontend of an unreleased AI workflow platform for education, taking responsibility for application architecture, feature development, and user experience.
- Reduced the frontend bundle size and improved page-loading and rendering performance across the platform.
- Build and release new features for ARK Connect, the company's public mobile application.
- Helped implement API rate limiting, including distributed support, unit tests, logging, and fallback handling.

Full Stack Developer Intern Feb 2026 – Aug 2026
Justo Global *Chennai, India*

- Built a visual multi-agent workflow builder using React Flow, FastAPI, and CrewAI. Added live updates and validated its functionality through internal testing.
- Developed an AI-assisted profile and resume builder with LangChain and LangGraph and presented the project at an internal AI workshop.
- Developed a training mobile application with React Native and Expo, implementing media chat, search, authentication, user profiles, and device information.
- Delivered features and fixed production bugs in an AI agent platform built with React, Node.js/Express, and FastAPI.

Front-End Web Developer Intern Jul 2024 – Sep 2024
Valsco Technology *Remote*

- Developed the home page and notes pages for a React web application where students can buy and sell study notes.
- Built responsive layouts for desktop, tablet, and mobile using HTML, CSS, and JavaScript, and added interactive 3D visuals with Spline.

Projects

Gatekeeper: Code-Quality Checks for AI Coding Agents Jun 2026 – Present
TypeScript, PostgreSQL, React

- Developing an independent tool that checks AI-generated code and tracks changes in a codebase's structure and quality over time.
- Designed 15 TypeScript packages accessible through a command-line interface, a Model Context Protocol (MCP) server, and a REST API, along with a React dashboard.
- Integrated ESLint, Knip, dependency-cruiser, and jscpd to analyze code in a sandbox and produce evidence-backed findings.
- Independently built the system and wrote more than 1,200 automated unit, security, and integration tests.

Cool Tools: Local Developer Toolkit Sep 2026 – Oct 2026
FastAPI, React, TypeScript

- Built eight local-first utilities for common development tasks, including a port manager, an LLM code packer, and an API key vault.

ReviewOp and FACET: Aspect-Based Sentiment Analysis Jan 2026 – Jun 2026

PyTorch, FastAPI, React

- Developed ReviewOp, a review-analysis application that uses a few-shot Prototypical Network to identify implicit aspects and categories not seen during training.
- Built FACET, a mixture-of-experts model that groups review aspects across different domains without requiring domain labels.
- Started this work in a team project exploring model-agnostic meta-learning (MAML) for aspect-based sentiment analysis using the SemEval and MAMS datasets.

Space7: Real-Time Community Chat App Feb 2026 – Apr 2026

React Native, TypeScript, Socket.IO, Node.js

- Migrated a cross-platform mobile app from Expo to bare React Native CLI and built 14 screens, including real-time chat, invite-link joining, search, notifications, profile editing, and password reset.
- Built real-time messaging over Socket.IO, with server-side checks on who can join each chat room.
- Secured the Node.js backend against unauthorized reads of private spaces, impersonated messages, cross-space deletes, and exposed user emails, with a regression test for each case.
- Set up GitHub Actions CI to run linting, type checks, 31 unit tests, and Android builds on every push.

CARESUM: Verification-Driven Clinical Dialogue Summarization Jun 2025 – Aug 2025

Python, Transformers, FastAPI, Docker

- Developed a system that converts doctor–patient conversations into structured clinical notes, with a focus on identifying factual errors in generated summaries.
- Built a Generator–Verifier–Judge pipeline: a model drafts the note, a fine-tuned classifier checks each sentence for factual consistency, and a language model reviews and refines the output.

Publications

Ivan Dominic, **Monish S**, Rishi Gattu Nandakumar, and Rajeshkannan Regunathan (2025). "CARESUM: A Verification-Driven Framework for Clinical Dialogue Summarization with an Intelligent Chatbot Interface." *2025 International Conference on Signal Processing, Computation, Electronics, Power and Telecommunication (IConSCEPT)*. DOI: 10.1109/IConSCEPT66142.2025.11436852.

Technical Skills

Languages: Python, TypeScript, JavaScript, Java, C, C++, SQL, R, HTML, CSS

AI and Data: PyTorch, Transformers, LangChain, LangGraph, CrewAI, Model Context Protocol (MCP), Faster-Whisper, pandas, NumPy

Web and Mobile: React, Next.js, React Native, Expo, Node.js, Express.js, FastAPI, Celery, Tailwind CSS, Shiny

Databases and Tools: PostgreSQL, MySQL, Redis, Prisma, Git, Docker, Bun, Vitest, pytest, Playwright

Certifications

AWS Certified Cloud Practitioner – Amazon Web Services
